## Stimulating, supporting and improving interdisciplinary collaboration

Report on the collaboration competences to be expected of different actors in mother- and childcare

Develop and implement a tool to support and encourage interdisciplinary collaboration

Study on the effect of using this tool on quality of collaboration.

## Usage of multimedia (audio and/or video) as an alternative to direct observation

Review on existing methods for using video/audio of healthcare practice, with analysis of context/conditions

Develop a method applicable and tested in the context of a Flemish training hospital

Study on the benefits and learning effect of this method
